

Memorial Branch Library Presents...

Winter Sky Astronomy Program 2011

Telescopic observations featuring Jupiter, its moons, and Venus

**Thursday,
December 15,
6:00 - 8:00**

VENUS

From Earth's view,
Venus goes through
phases like the
Moon.

**CALL
(323) 938-2732
FOR MORE INFORMATION**

To be held at:
Memorial Branch
Library
4625 W. Olympic Blvd.
Los Angeles, 90019

Telescopic view of Jupiter and
three of four Galilean moons

Space probe view

Jupiter is the largest planet in the Solar System

Ten Earths could fit across its diameter. It is a gas giant, made up mostly of hydrogen and helium, with possibly no solid surface like our planet has. While it has as many as 63 moons, four—those discovered by Galileo—are readily visible through a small telescope. Come see for yourself.

**We'll also be turning our telescopes on the waxing
gibbous Moon on the night of December 15th!**

**Telescopes provided by L.A. Astronomical
Society and L.A. Sidewalk Astronomers**
